

A Postdoctoral Research Associate position is open to highly motivated people to perform basic research in neurobiology. The successful candidate will participate in research in one or more of the following areas including the identification of neural circuitry involved in specific behavioral tasks, the molecular mechanisms of circuit specification and development, and the plasticity of the neural circuitry. The lab employs a combination of methodologies including molecular genetics, multiphoton imaging, electrophysiology, and automated behavioral assays.

Qualified candidates are expected to hold a doctoral degree in the life sciences, chemistry, biophysics, or other related fields. Candidates with experience in molecular biology, electrophysiology, neuroscience, engineering, or computer science are encouraged to apply. The Stowers Institute offers a highly competitive compensation package including full medical, dental and vision insurance, as well as retirement benefits. For further information please visit:
