

A Research Technician I position is open to highly motivated people wishing to participate in cutting-edge biomedical research. The successful candidate will participate in research projects in molecular and developmental neurobiology. The research uses mice as an animal model and involves one or more of the following technologies: molecular biology, analytical chemistry, optical imaging and histology. Responsibilities include assisting senior scientists in experiments, performing independent research as well as assisting with lab maintenance.

The successful candidate will be highly independent to engage in a rigorous research program; have excellent written and verbal communication skills; and the ability to effectively work in a team-oriented environment. Requirements include an undergraduate degree in molecular biology, biochemistry, chemistry, neuroscience, or a related field as well as experience in a research environment. People with other backgrounds, such as computer science, engineering and mathematics are also encouraged to apply.

Please send resume and letters of reference to Dr. Ron Yu at cry@stowers.org.
